

October 15, 2011

This application will be available soon. For now, you will have to pick one up at the office.

Please note that even when the application becomes available online to print at home, you are still required to come to our office to meet the animal and staff and get your adoption application approved.

Most adoptions take two visits, one to meet the animal and go over the adoption process, and another to pick the animal up after it is fixed.

We do not ship animals, allow deposits to hold animals, or allow you to have an animal from us without getting it fixed, microchipped, given a rabies vaccination and the first round of boosters, a deflea and deworm, and for dogs over six months old, a heartworm test. Your adoption fee goes towards these procedures.

We cannot guarantee the availability of any animal, and *even if you are told that it is available for adoption over the phone, it might not be available when you arrive*. We apologize for the inconvenience this may cause, but we are short-staffed and do not have the financial means to hire more staff members.

For an additional fee, we do offer FIV/FelV/HW tests on felines. This is all done in one blood test. The test fee is nonrefundable, and the test can be performed before you commit to the adoption.
